Experience

Software Developer | Star5 Creative Inc.
July 2022 - Septembre 2022

Throughout this time, I worked on the begin of the OrangeHRM Project. Among my functions were:

- Installation of Ubuntu Linux and download the OrangeHRM Software through command line.
- Control and adjustment of JavaScript and PHP code as well as customization of HTML and CSS tagging respeting to the company branding.
- Data management with Databases as MariaDB and MySQL for the CRUD (create, read, update, delate) of data.

Technical Support | Rodelag
September 2016 - December 2016

I did basic technical support tasks, among which I highlight:

- Computer maintenance.
- Preparation of reports.
- OS installation like Windows, Ubuntu Linux.
- Wire Ethernet cables(Direct and Crossover).

Personal Projects

DevWebCamp

It's a website for developers where they can buy tikets for workshops or conferences. Builded with MVC, PHP as back-end, using the Swiper library for sliders, CSS, SASS for styles, animation for some items and more.

Code

UpTask

Web application, it is a project and task manager inspired by asana and trello. Built with MVC, you can create an account that will be saved in a database, as well as the projects and tasks for each project.

Code

AppSalon

Web app to book appointments in a barbershop, it has different services with all kinds of prices, control of dates for each record and saved in a DB. It was developed with PHP, JS, SASS, and MySQL as DB.

Code
